

Adamrit HRPulse Simple User Guide

Generated on: 25 July 2026

This guide explains every main tab, button, card, and small action added or used in HRPulse and Adamrit HR. It is written in simple language so HR team members and hospital staff can understand how the system works.

Private passwords, API keys, service-role keys, and secret tokens are not included in this document.

1. Two Applications

There are two separate applications:

- HRPulse
- Adamrit

They are connected, but they are not merged.

HRPulse is the master system for HR work.

Adamrit is the hospital system where employees already log in every day. Adamrit now shows an HR tile so employees can see their own HR information.

2. Main Rule

HRPulse does the calculation.

Adamrit only shows the result.

This means:

- Attendance calculation happens in HRPulse.
- Salary calculation happens in HRPulse.
- Overtime calculation happens in HRPulse.
- Half-day deduction happens in HRPulse.
- Leave approval happens in HRPulse.
- Notifications are generated by HRPulse.
- Adamrit displays the final information to the employee.

3. HRPulse Main Tabs

3.1 Dispatcher Tab

Purpose:

The Dispatcher tab is used to upload and process biometric attendance Excel files.

What HR does here:

- Upload daily attendance Excel.
- Upload multiple days together.
- Process attendance.
- Save attendance records into HRPulse.
- Trigger automatic attendance analysis.
- Trigger automatic employee notifications.

Important:

If you upload data for 1 day, HRPulse analyzes that day.

If you upload data for 4 to 10 days, HRPulse analyzes every date separately.

If the sheet contains next month data, HRPulse puts those records into the correct next month.

Upload Attendance Button

What it does:

- Opens file picker.
- HR selects biometric Excel file.
- HRPulse reads employee punch-in and punch-out data.
- HRPulse detects date, month, and year.
- HRPulse saves attendance records.
- HRPulse starts alert generation after processing.

Process Attendance Button

What it does:

- Starts attendance processing.
- Converts raw Excel punch data into clean attendance records.
- Finds first punch-in and last punch-out.
- Calculates working hours.
- Applies shift time.
- Detects status such as Present, Absent, Half Day, Late, Missing Punch, Weekly Off, or Holiday Work.

Warnings After Upload

What it means:

If HRPulse shows a warning, it does not always mean upload failed.

Examples:

- Multiple months found in one file.
- Some employees could not be matched.
- Some rows had missing data.
- Some records were replaced because they already existed.

3.2 Payroll Tab

Purpose:

The Payroll tab calculates salary using HRPulse attendance and salary rules.

What HR does here:

- Select payroll month.
- View employee salary summary.
- Check present days, absent days, half days, payable days, deductions, overtime, and net salary.
- Generate payslips.
- Download punch timing PDF.

Month Selector

What it does:

- Lets HR choose which month payroll should show.
- Example: June 2026 or July 2026.
- Payroll summary changes based on selected month.

Employee Salary Row

What it shows:

- Employee name.
- Department.
- Monthly salary.
- Present days.
- Paid leaves.
- Half days.
- Absences.
- Late count.
- Missing punch count.
- Working hours.
- Overtime.
- Overtime pay.
- Gross salary.
- Deductions.
- Final net salary.

View Salary Details Button

What it does:

- Opens the employee salary detail drawer.
- Shows detailed day-by-day attendance records.
- Shows salary calculation formula.
- Shows payroll rules applied.
- Shows final salary.

Punch Timing PDF Button

What it does:

- Downloads a PDF showing employee punch timings.
- Useful for checking exact attendance records.

Payslip Button

What it does:

- Downloads salary payslip PDF.
- Employee can also download payslip from Adamrit HR tile if allowed.

3.3 Employees Tab

Purpose:

The Employees tab is the HRPulse Employee Master.

This is where HR manages employee records.

Important:

Adamrit employee must match HRPulse employee using email or unique employee code.

Add Employee Button

What it does:

- Opens form to create a new employee.
- HR fills employee name, employee ID, email, mobile, department, designation, shift, salary, status, and leave eligibility.

Edit Employee Button

What it does:

- Opens the selected employee record.
- HR can update employee details.
- Employee email is important because Adamrit uses it for mapping.

Save Changes Button

What it does:

- Saves updated employee details.
- Example: email, salary, shift, department, designation.

Important:

If email is wrong, Adamrit HR tile may show wrong/no HR data.

Email Address Field

What it does:

- Stores employee email in HRPulse.
- This should match the employee login email in Adamrit.

Example:

If employee logs into Adamrit with `cmd@hopehospital.com`, then HRPulse Employee Master should also have `cmd@hopehospital.com`.

Employee ID Field

What it does:

- Stores unique employee code/id.
- Used for attendance and payroll matching.
- Should not be duplicated.

Department Field

What it does:

- Stores employee department such as IT, Nursing, Billing, Pharmacy, Lab.

Designation Field

What it does:

- Stores employee role such as Accountant, Nurse, Technician, Doctor, Manager.

Shift Field

What it does:

- Defines employee assigned shift.
- Shift is used for late, early leaving, overtime, and working hour calculations.

Monthly Salary Field

What it does:

- Stores employee monthly salary.
- Payroll uses this value for salary calculation.

Shift Start Time Field

What it does:

- Defines expected punch-in time.
- Example: 09:00 AM.

- Late coming is calculated using this time.

Shift End Time Field

What it does:

- Defines expected punch-out time.
- Example: 06:00 PM.
- Overtime and early leaving are calculated using this time.

Status Field

What it does:

- Active means employee is currently working.
- Inactive means employee should not be treated as active for HR operations.

Eligible for Paid Leaves

What it does:

- Defines whether employee can receive paid leave benefit.

3.4 Employee Documents Section

Purpose:

Stores employee documents.

Documents can be uploaded from Adamrit HR tile and viewed in HRPulse Employee Master.

Examples:

- ID proof
- Address proof
- Education certificate
- Experience letter
- Medical certificate
- Bank document
- Other document

Download Document Button

What it does:

- Opens or downloads the employee document.

3.5 Leave Requests Tab

Purpose:

HRPulse Super Admin uses this tab to approve or reject employee leave requests.

Employees submit leave from Adamrit HR tile.

HR reviews it in HRPulse.

Pending Leave Request

What it means:

- Employee has submitted leave.
- HR has not approved or rejected yet.

Approve Button

What it does:

- Marks leave as approved.
- Updates HRPulse leave record.
- Creates notification for employee.
- Sends notification to Adamrit HR tile.

Reject Button

What it does:

- Marks leave as rejected.
- Saves HR reason/note if provided.
- Creates rejection notification.
- Sends notification to Adamrit HR tile.

3.6 Salary Tab

Purpose:

Shows salary and payroll records.

This tab is for HR/Admin.

Generate Salary Button

What it does:

- Calculates salary for selected month.
- Uses attendance, leave, overtime, half day, absence, and salary rules.
- Generates salary output.

Salary Summary

What it shows:

- Gross salary.
- Total deductions.
- Net salary.
- Payable days.
- Working days.
- Half-day deduction.
- Overtime pay.

3.7 Rules Tab

Purpose:

The Rules tab stores attendance and payroll rules.

Rules help HRPulse understand what to do when attendance conditions happen.

Examples:

- Late coming rule.
- Missing punch rule.
- Absence rule.
- Half-day rule.
- Overtime rule.
- Early leaving rule.

New Rule Button

What it does:

- Opens rule creation form.
- HR can create an attendance/payroll rule.

Rule Name Field

What it does:

- Name of the rule.

Example:

3 late arrivals deduct 1 day

Problem Field

What it does:

- Selects what issue this rule checks.

Examples:

- Absences
- Late coming
- Missing punch
- Half day
- Overtime

Condition Field

What it does:

- Defines when the rule applies.

Example:

Late arrivals are 3 or more

Salary Effect Field

What it does:

- Defines what should happen to salary.

Examples:

- No salary effect
- Deduct salary days
- Add overtime pay

Value Field

What it does:

- Defines amount of deduction or benefit.

Example:

If salary effect is Deduct salary days and value is 1, then one day salary is deducted.

Department Field

What it does:

- If blank, rule applies to all departments.
- If department is selected, rule applies only to that department.

Active/Inactive Toggle

What it does:

- Active rule affects processing.
- Inactive rule stays saved but does not affect processing.

Edit Rule Button

What it does:

- Opens existing rule for changes.

Delete Rule Button

What it does:

- Removes the rule.

Use carefully.

3.8 Email History Tab

Purpose:

Shows email/notification history created by HRPulse.

Important:

Current HRPulse-to-Adamrit employee messages are notification-bell messages, not WhatsApp messages.

3.9 SOPs Tab

Purpose:

Stores standard HR procedures or company policy instructions.

3.10 AI Insights Tab

Purpose:

Shows HRPulse AI-related insights where available.

AI is used to help create professional notification messages and attendance insights. Adamrit does not generate attendance AI messages by itself.

4. Adamrit Tablet View

Adamrit is the hospital management system.

Employees log in with their existing Adamrit username/password.

The HR tile is added inside Tablet View.

4.1 HR Tile

Purpose:

Opens the employee's HR self-service portal.

What happens when clicked:

Adamrit checks the logged-in employee.

Adamrit sends secure request to HRPulse.

HRPulse identifies matching employee.

HRPulse returns only that employee's data.

Adamrit displays it.

Important:

Employee cannot select another employee from the HR tile.

4.2 HR Page Header

Shows:

- Page name: HR
- Logged-in email
- HRPulse notification bell
- Refresh, Export, and Print actions

4.3 Back Button

What it does:

- Returns to previous Tablet View screen.

4.4 Notification Bell

Purpose:

Shows HRPulse notifications inside Adamrit.

Badge number:

- Shows unread notification count.
- Example: **7** means 7 unread HRPulse notifications.
- **99+** means more than 99 unread notifications.

Clicking bell:

- Opens the notification drawer.

4.5 Notification Drawer

Purpose:

Displays HRPulse notifications for the logged-in employee.

It shows:

- Notification title
- Message
- Severity color
- Date/time
- Read/unread status

Types of messages:

- Late arrival
- Missing punch
- Missing punch-in
- Missing punch-out

- Half day
- Absent
- Low attendance percentage
- Overtime
- Holiday work
- Weekly off work
- Leave submitted
- Leave approved
- Leave rejected
- Payroll processed
- Payslip available

Mark All Read Button

What it does:

- Marks all employee notifications as read.
- Bell count reduces or becomes zero.

Refresh Button in Notification Drawer

What it does:

- Loads latest HRPulse notifications again.

Clicking One Notification

What it does:

- Marks that notification as read.

4.6 Toast Message

Purpose:

Small popup message shown when a new HRPulse notification arrives while HR tile is open.

Example:

Late arrival on 17 Jun 2026

Toast helps employee immediately see a new alert.

5. Adamrit HR Profile Card

Purpose:

Shows employee basic HR profile from HRPulse.

Fields:

- Profile photo or icon
- Employee name
- Employee ID
- Department
- Designation
- Shift
- Joining date
- Shift in time
- Shift out time
- Email

- Manager
- Leave balance
- Attendance percentage

Profile Photo

What it does:

- Shows employee image if available.
- Shows default user icon if no photo exists.

Active Badge

What it means:

- Employee status is active.

Attendance Circle

What it shows:

- Current monthly attendance percentage.

6. Today's Attendance Card

Purpose:

Shows today's attendance status.

Fields:

- Punch In
- Punch Out
- Hours
- Status

Status Banner

Examples:

- Ready to Punch In
- You have not punched out yet.
- Attendance completed for today.

What it means:

This tells the employee current attendance state for today.

Punch In Value

What it shows:

- First punch-in time for today.
- If blank, it shows - .

Punch Out Value

What it shows:

- Last punch-out time for today.
- If blank, it shows - .

Hours Value

What it shows:

- Total working hours for today.

Status Badge

What it shows:

- Present
- Absent
- Half Day
- Late
- Missing Punch
- No Record

7. Monthly Summary Card

Purpose:

Shows selected month's attendance summary.

Month Picker

What it does:

- Lets employee select month.
- Adamrit asks HRPulse for that month.
- All monthly cards update based on the selected month.

Present

Shows number of present days.

Absent

Shows number of absent days.

Half Day

Shows number of half-day records.

Late

Shows number of late arrivals.

Missing

Shows number of missing punch records.

Overtime

Shows overtime hours calculated by HRPulse.

Working

Shows working days in selected month.

Attendance

Shows attendance percentage for selected month.

8. Weekly Attendance Chart

Purpose:

Shows recent 7 attendance days as simple bars.

Each bar:

- Represents one day.
- Taller bar means more working hours.
- Hover shows date and hours.

If no data:

- It shows `No attendance data for this week.`

9. Salary Card

Purpose:

Shows current salary summary from HRPulse.

Fields:

- Gross
- Deductions
- Net
- Payable
- Working
- Half days
- Half-day deduction
- Overtime hours
- Overtime pay

Gross

Total salary before deductions.

Deductions

Total salary deductions.

Examples:

- Absence deduction
- Half-day deduction
- Rule deduction

Net

Final salary after deductions and additions.

Payable

Number of payable days.

Example:

If employee worked full day, payable is 1.

If employee has half day, payable is 0.5 for that day.

Working

Total working days used for payroll.

Half Days

Number of half-day records.

Half-Day Deduction

Salary deduction because of half day.

Formula:

$$\text{Half Day Deduction} = (\text{Monthly Salary} / 30) / 2$$

Overtime Hours

Total overtime hours calculated by HRPulse.

Overtime Pay

Overtime payment calculated by HRPulse.

Formula:

$$\text{Per Day Salary} = \text{Monthly Salary} / 30$$

$$\text{Overtime Per Day} = (\text{Monthly Salary} / 30) / 2$$

Payslip Button

What it does:

- Downloads the payslip PDF for selected/current payroll month.

If disabled:

- No payroll/payslip is available for that month yet.

Previous Salary History Rows

What they show:

- Period month
- Overtime pay
- Half-day deduction
- Net salary
- Salary status

Download Icon in Salary History

What it does:

- Downloads payslip for that salary month.

10. Leave Card

Purpose:

Allows employee to see leave balance and submit leave request.

Leave Balance Cards

Shows available leave by leave type.

Examples:

- Paid Leave
- Sick Leave
- Casual Leave
- Earned Leave

Leave Type Field

What it does:

- Employee enters/selects leave type.

Example:

Paid Leave

Start Date Field

What it does:

- Selects leave start date.

End Date Field

What it does:

- Selects leave end date.

Reason Field

What it does:

- Employee writes reason for leave.

Submit Leave Request Button

What it does:

- Sends leave request from Adamrit to HRPulse.
- HRPulse stores it.
- HRPulse Super Admin approves or rejects it.
- Employee receives notification in Adamrit after decision.

Button is disabled if:

- Leave type is empty.
- Start date is empty.
- End date is empty.
- Request is already submitting.

Leave Request List

Shows recent leave requests.

Each request shows:

- Leave type
- Start date
- End date
- Status

Statuses:

- Pending
- Approved
- Rejected

11. Documents Section

Purpose:

Employee can upload HR documents from Adamrit.

These documents also appear in HRPulse Employee Master.

Document Type Dropdown

What it does:

Employee selects document category.

Options:

- Identity Document
- Address Proof
- Education Certificate
- Experience Letter
- Medical Certificate
- Bank Document
- Other Document

Upload Button

What it does:

- Opens file picker.
- Employee selects file.
- Adamrit sends file to HRPulse.
- HRPulse stores file.
- Document appears in Adamrit and HRPulse Employee Master.

Allowed files:

- PDF
- PNG
- JPG/JPEG
- Word document
- Text file

Uploaded Document Card

Shows:

- File name
- Document type
- File size
- Upload date

Click Uploaded Document

What it does:

- Opens/downloads the document.

12. Attendance History Section

Purpose:

Shows day-wise attendance history for selected month.

Each day card shows:

- Date
- Punch-in time
- Punch-out time
- Working hours
- Attendance status

Examples:

- Normal
- Absent
- Weekend
- Missing Swipe
- Half Day
- Late

13. Bottom Navigation in Adamrit Tablet View

The bottom navigation is part of Adamrit Tablet View.

Home

Returns to main dashboard.

Register

Opens hospital registration workflow.

Billing

Opens billing module.

Notes

Opens notes module.

Meds

Opens medicines/medication module.

14. Top Header Buttons in Adamrit

Install Button

Used for installing the app as PWA when browser allows it.

Theme Button

Switches theme if supported by Adamrit.

Switch Button

Switches view/context where Adamrit supports it.

Full Site Button

Moves from tablet view to full site where supported.

Exit Button

Exits the current tablet/module flow.

15. Day-Wise Notification Examples

15.1 Late Arrival

Condition:

Employee punch-in is later than shift start time.

Example:

- Shift start: 09:00
- Punch in: 10:05

Notification:

Late arrival on 17 Jun 2026

Where it shows:

- Adamrit HR notification bell
- Adamrit notification drawer
- Toast message if HR tile is open

15.2 Missing Punch-Out

Condition:

Employee has punch-in but no punch-out.

Notification:

Your attendance on 09 Jun 2026 has a missing punch-out. Please regularize it before payroll processing.

15.3 Missing Punch-In

Condition:

Employee has punch-out but no punch-in.

Notification:

Your attendance on 09 Jun 2026 has a missing punch-in. Please regularize it before payroll processing.

15.4 Absent

Condition:

No valid attendance record for a working day.

Notification:

Employee gets absence notification for that date.

15.5 Half Day

Condition:

Working hours are less than 4 hours.

Payroll effect:

Half day deduction is applied.

Notification:

Employee gets half-day alert for that date.

15.6 Overtime

Condition:

Employee works more than 2 hours after shift end.

Example:

- Shift end: 06:00 PM
- Punch out: 08:15 PM
- Overtime: 2 hours 15 minutes

Notification:

Employee gets overtime notification for that date.

Salary effect:

Overtime pay is calculated by HRPulse.

15.7 Low Attendance Percentage

Condition:

Monthly attendance percentage falls below defined threshold.

Notification:

Employee gets warning in Adamrit notification bell.

This is a monthly pattern alert, not a single-day alert.

16. What Happens After Excel Upload

Simple flow:

HR uploads Excel in HRPulse Dispatcher.

HRPulse reads all attendance rows.

HRPulse identifies employee by employee id/code/email.

HRPulse identifies exact date from sheet.

HRPulse saves attendance record.

HRPulse calculates status.

HRPulse checks late, missing punch, absent, half day, overtime, etc.

HRPulse creates notification for each affected employee/date.

HRPulse pushes notification to Adamrit.

Employee opens Adamrit HR tile.

Employee sees notification in bell.

17. Why Employee May Not See Data

Possible reasons:

- Employee email in HRPulse is missing.
- Employee email in HRPulse is different from Adamrit login email.
- HRPulse backend is not running.
- Adamrit local server is not running.
- Integration token is missing.

- Notification webhook URL is wrong.
- Supabase table is missing.
- Employee has no attendance data for selected month.
- Month selector is on wrong month.
- Browser is logged in as different employee.

18. What HR Must Check Before Testing

Before testing notifications:

- Open HRPulse Employee Master.
- Check employee email.
- Check employee ID.
- Check employee shift start/end time.
- Upload Excel containing that employee.
- Select correct month in Adamrit HR tile.
- Open notification bell.

19. Simple Testing Example

Test employee:

- HRPulse employee email: `cmd@hopehospital.com`
- Adamrit login email: `cmd@hopehospital.com`

Test late arrival:

Set shift start time to `09:00`.

Upload Excel where employee punch-in is after `09:00`.

Wait for HRPulse processing to complete.

Open Adamrit HR tile.

Open notification bell.

Late arrival notification should show with date.

Test missing punch:

Upload Excel where employee has only punch-in or only punch-out.

Open Adamrit HR tile.

Missing punch notification should show with date.

Test half day:

Upload Excel where working hours are below 4 hours.

HRPulse marks Half Day.

Salary shows half-day deduction.

Adamrit shows half day in summary/history.

Test overtime:

Set shift end time to `18:00`.

Upload Excel where punch-out is after `20:00`.

HRPulse calculates overtime.

Adamrit monthly summary and salary card show overtime data.

20. Important Notes

- Do not map employees by name.
- Always use email or employee ID/code.
- HRPulse must remain master.
- Adamrit should not calculate salary.
- Adamrit should not calculate attendance.
- Adamrit should not approve leave.
- Adamrit should only show the employee's own HR data.
- Notification messages should be generated by HRPulse.
- Day-wise messages should mention the exact attendance date.

21. Summary

HRPulse is the HR brain.

Adamrit is the employee screen.

HRPulse receives attendance Excel, calculates all HR rules, creates notifications, calculates salary, manages leave, and stores documents.

Adamrit lets the employee view their own HR information, submit leave, upload documents, download payslips, and read HRPulse notifications.

Every button and tab exists to keep HR work centralized in HRPulse while giving employees a simple self-service experience inside Adamrit.
